

## **Project name: Urban Workers**

*This project involves creating a database that allows users to book local workers for home services. such as plumbing, electrical work, and house cleaningand others. The database could store worker profiles, appointment schedules, and customer feedback.*

### **Goal:**

*The goal is "Urban Workers" database project is to create a system that connects local workers with general people or clients who are seeking specific services or skills. The motivation behind this type of project is to provide a convenient and efficient way for people to find local workers, whether it be for home services, or any other type of task. By creating a database that stores worker profiles, job postings, and other relevant information, users can easily search for and connect with workers in their local area, saving time and effort compared to traditional methods such as searching workers or going to markets. Additionally, these types of projects can help workers expand their client base and find new job opportunities, while also providing a platform for general people or clients to leave reviews and feedback on the quality of work performed.*

**User:** *local worker and general people who need worker.*

**Role:** *local worker sells their services via in this platform.*

*we use mySql database and others (if required) for this project.*
